PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building production-grade mobile applications and backend systems. Strong expertise in Flutter (Dart) for cross-platform development and Node.js/Express for scalable REST APIs. Proven ability to implement secure authentication, real-time data synchronization, and financial logic in real-world applications. Focused on clean architecture, performance, and reliability.

TECHNICAL SKILLS

Mobile & Backend: Flutter, Dart, Node.js, Express.js

Web Technologies: JavaScript (ES6+), HTML5, CSS3, React.js

APIs & Security: REST APIs, JWT Authentication, Bcrypt, Middleware

Databases & Cloud: MongoDB, Firebase Realtime DB & Auth, Cloudinary

Tools: Git, GitHub, Postman, VS Code

PROJECTS

Grocery Store Management System — HTML, CSS, Firebase

- Developed a cross-platform grocery management app to handle inventory, sales, purchases, and expenses.
- Implemented real-time data sync using Firebase Realtime Database.
- Built automated Profit & Loss calculations (daily, monthly, yearly).
- Designed ledger tracking for customer/vendor debit-credit history.
- Created responsive UI optimized for low-network environments.

FinanceWise — Flutter, Node.js, MongoDB

- Developing a full-stack personal finance application to streamline expense tracking and budget planning for individual users.
- Implementing a scalable backend architecture using Node.js, Express, and MongoDB to handle complex financial data storage.
- Building automated transaction analysis and financial health reporting modules based on core accounting principles.
- Designing secure REST APIs with JWT authentication for protected user data and historical spending logs.
- Creating a high-performance Flutter UI with efficient state management to ensure real-time updates and smooth navigation.

Video Streaming Platform (Backend API) — Node.js, Express, MongoDB

- Built secure REST APIs for video uploads, likes, comments, and subscriptions.
- Implemented JWT authentication with access/refresh tokens.
- Designed MongoDB schemas for users, videos, and watch history.
- Integrated Cloudinary for media storage and delivery.

MERN Task Manager –

- Implemented secure user authentication with login and registration using JSON Web Tokens (JWT)
- Developed functionality for users to create and manage personal projects efficiently.
- Built comprehensive task tracking features to add, delete, and mark tasks as completed.
- Integrated MongoDB Atlas for persistent, cloud-based data storage and management.
- Designed a clean, responsive user interface using React and CSS for Cross-device compatibility.

EDUCATION

Master of Computer Management (MCM) | 2024 – 2026

Bachelor of Commerce (B.Com) | 2021 – 2024
