Summary

Full Stack Developer with hands-on experience building production-grade mobile applications and backend systems. Strong expertise in Flutter (Dart) for cross-platform development and Node.js/Express for scalable REST APIs. Proven ability to architect multithreaded media engines, implement secure authentication, and engineer AI-driven B2B logic. Focused on clean architecture, performance optimization, and reliable data synchronization.

TECHNICAL SKILLS

- **Mobile & Backend:** Flutter, Dart, Node.js, Express.js
- **Web Technologies:** JavaScript (ES6+), HTML5, CSS3, React.js
- **APIs & Security:** REST APIs, JWT Authentication, Bcrypt, Middleware
- **Databases & Cloud:** MongoDB, Firebase Realtime DB & Auth, Cloudinary
- **Tools & Architecture:** Git, GitHub, Postman, VS Code, Multithreading (Isolates), NoSQL

Projects

Duplicate Sweeper (High-Performance Media Engine) | *Flutter, Dart, Isar, Computer Vision*

- Engineered a multithreaded media scanning pipeline using Dart Isolates to process and decode large image datasets on background CPU cores, maintaining a flawless 60 FPS UI thread.
- Implemented a custom Difference Hashing (dHash) algorithm with a dynamic 1:1 centercrop to accurately detect duplicate images while actively resisting letterboxing and compression artifacts.
- Architected a Vantage Point Tree (VP-Tree) to geometrically partition 64-bit perceptual hashes, reducing clustering time complexity from $O(N^2)$ to $O(N \log N)$.
- Integrated a high-speed Isar NoSQL database for persistent delta caching, allowing the engine to instantly resume interrupted scans and protecting against OS memory-killer interventions.
- Bypassed device memory limits by writing strict SQLite pagination rules to ingest metadata for 10,000+ files in batches, preventing Out-Of-Memory (OOM) crashes on older hardware.

Nexa (AI-Powered E-Commerce OS) | *React.js, Node.js, MongoDB, Gemini API*

- Architected a full-stack, dual-sided e-commerce platform featuring a B2C customer storefront and a secure B2B enterprise dashboard for live inventory and order pipeline management.
- Integrated the Google Gemini API to build an autonomous B2B proposal generator, calculating optimized product mixes based strictly on live database stock and budget constraints.
- Enforced strict structured JSON outputs from the LLM to seamlessly parse unstructured AI-generated business logic into deterministic MongoDB database records.
- Built secure multipart/form-data upload pipelines using Multer to handle dynamic product catalog images alongside text data, preventing backend server crashes.

FinanceWise — *Flutter, Node.js, MongoDB*

- Developing a full-stack personal finance application to streamline expense tracking and budget planning for individual users.
- Implementing a scalable backend architecture using Node.js, Express, and MongoDB to handle complex financial data storage.
- Building automated transaction analysis and financial health reporting modules based on core accounting principles.
- Designing secure REST APIs with JWT authentication for protected user data and historical spending logs.
- Creating a high-performance Flutter UI with efficient state management to ensure realtime updates and smooth navigation.

Additional Projects:

Video Streaming Backend (Node.js, MongoDB): Constructed secure REST APIs with JWT access/refresh tokens and Cloudinary integration for scalable media delivery.

Grocery Store Management (Firebase, HTML/CSS): Deployed a cross-platform inventory tracker featuring real-time data sync using Firebase Realtime Database.

Education

Master of Computer Management
Smt.Laxmibai Radhakisan Toshniwal

2024 – 2026
Akola

Bachelor of Commerce (B.Com)
Smt.Laxmibai Radhakisan Toshniwal

2021 – 2024
Akola
